

Sebastian Holmberg Nilsson

Software Developer

Junior developer in training within software development, with a focus on AI, and hands-on experience from an internship (LIA) at Omegapoint in Malmö. I have worked in agile teams developing solutions in fintech and CMS systems, using technologies such as C#, .NET, JavaScript, and React.

I have a strong technical curiosity and am quick to learn new systems and ways of working. With a background in leadership roles within retail, I also bring structure, accountability, and strong collaboration skills.

My goal is to take on a role as a junior developer where I can continue to grow and contribute to teams and projects from the start.

Highlighted Projects

Software Developer – Internship(LIA)

Omegapoint Malmö AB | 2025-2026

Developed functionality in projects within fintech and CMS systems for a banking client for their german domain. Worked with backend and APIs using C#/.NET, as well as frontend development in JavaScript and React. Participated in agile workflows (Scrum), including daily stand-ups, sprint planning, and collaborative team efforts. Contributed within a development team with a focus on problem-solving and code quality, while using modern development tools and version control with Git.

Software Developer

BeUniq AB | 2026 | Project based

Developed a full web platform for the travel company BeUniq AB, with a strong focus on user experience and conversion. Built the application using React, TypeScript, and Vite in a component-based architecture, and implemented serverless solutions with Vercel, Supabase, and Resend for data storage and email delivery. Created an automated quotation system using Web3Forms to handle customer inquiries, and designed a rule-based chatbot connected to travel data to ensure accurate responses. Developed a newsletter feature with user data storage and automated welcome emails, and worked with responsive design, routing, and user flows to guide users from inspiration to contact. The application was deployed and maintained in production using Vercel.

Languages:

C#, JavaScript, TypeScript, Python, Java, Kotlin

Frontend:

React, Next.js, HTML, CSS

Backend:

.NET, REST APIs, Spring Boot

Databases:

PostgreSQL

Methods & Processes:

Agile development (Scrum), Code reviews, Pair programming, Refactoring, CI/CD, Testing (unit & integration), Clean code

Concepts:

Component-based architecture, Serverless architecture, Responsive design, System design basics

Tools:

Git, GitHub, Visual Studio, VS Code, JetBrains Rider, Azure DevOps

Cloud & Platforms:

Vercel, Supabase, Cloud platforms

Other:

Experience building and deploying production applications
